PROFESSIONAL SUMMARY

Business and Data Analyst with an MS in Business Analytics (UMass Amherst, Dec 2026, GPA 3.97) and business analysis, marketing, and finance analytics experience. Uses SQL, Python, and Excel to clean, validate, and transform data and builds Tableau and Power BI dashboards. Designed A/B tests that lifted course completion 12% and built an ETL pipeline that cut reporting turnaround 30%. Translates data into clear recommendations for product, marketing, and finance stakeholders.

TECHNICAL SKILLS

- **Data & BI Tools:** SQL, Tableau, Power BI, Excel (PivotTables, XLOOKUP, INDEX/MATCH, Power Query, VBA macros)
- **Programming:** Python (pandas, scikit-learn, statsmodels, Seaborn, Plotly)
- **Analytics & Statistics:** A/B testing, experiment design, hypothesis testing, exploratory data analysis, regression analysis, predictive modeling, feature selection, rule-based classification, cohort and retention analysis, funnel metrics, KPI definition
- **Data Management:** unstructured data analysis, data extraction, data standardization, data cleaning, data validation, data quality checks, ETL pipelines, documentation
- **Business Skills:** stakeholder communication, data storytelling, requirements gathering, process mapping, process automation, ad hoc reporting, dashboard design, training non-technical users

PROFESSIONAL EXPERIENCE

GVQ Services | Business Analyst | Hyderabad, India **Mar 2025 – Dec 2025**

- Analyzed raw material and project requirements data for an architecture company using SQL and Python, translating project specifications into structured insights for material planning and resource allocation.
- Developed SQL queries to join project and material datasets, aggregate requirements, and compare material quantities across projects and reporting periods.
- Built reusable Python workflows to clean and transform source data, resolve missing values and duplicate records, and validate material quantities before analysis.
- Designed Power BI dashboards with project-level filters and material-level summaries to communicate requirements, highlight trends, and support planning discussions.
- Partnered with project stakeholders to define reporting requirements and planning metrics; investigated data discrepancies and documented data sources, transformation rules, and validation checks.

Infosys | Marketing Associate | Bangalore, India **Jan 2025 – Mar 2025**

- Partnered with product and marketing stakeholders to map the learner journey and define activation, drop-off, and completion KPIs; built a weekly Excel and Tableau dashboard to track them.
- Designed and analyzed A/B tests on in-app and email timing and copy, improving course completion by 12% and email click-through rate by ~8%.
- Found gaps in completion data and worked with the product team to instrument missing tracking events, improving data quality and cohort-retention accuracy.

AP Urban | Finance Associate | Vijayawada, India **Dec 2024**

- Replaced manual Excel roll-ups with a Power Query ETL pipeline and Tableau dashboard for sanitation and finance KPIs, cutting report turnaround time by 30%.
- Automated monthly A/P, A/R, and general ledger reconciliations using PivotTables, XLOOKUP, and conditional flags, reducing monthly close time.
- Standardized field-office submissions with validation rules; wrote dashboard documentation and trained non-technical staff.

PROJECTS

Fidelity Labs (AltIQ) – Applied Business Analytics Practicum | Academic client project | Python, Excel **In progress**

- Extract unstructured data from private placement memorandums (PPMs) and web disclosures into standardized fields.
- Evaluate features (underlying assets, ownership vs. lending, security type, liquidity) to classify Private Equity, Private Credit, and Private Real Assets funds; prototyping a Python extraction and rule-based classification workflow.
- Document data quality issues and recommend standardized category definitions, data requirements, and review procedures.

Target Store Expansion Analysis | Python, pandas, Plotly

- Analyzed U.S. Target store-location data to assess market expansion; built interactive time-series and geographic KPI visuals.

Laptop Sales Analysis and Price Prediction | Python, pandas, scikit-learn, statsmodels, Seaborn

- Analyzed London retail laptop sales for price trends, store performance, and customer behavior; built regression price-prediction models (R-squared, residual diagnostics).

EDUCATION

University of Massachusetts Amherst | MS, Business Analytics | GPA: 3.97 | Amherst, MA **Expected Dec 2026**

Osmania University | BBA, Business Analytics | GPA: 3.5 | Hyderabad, India **Sep 2022 – May 2025**

Relevant Coursework: Database Management (SQL), Business Analytics with Python, Statistics, Machine Learning, Application of AI
